

M-Files Connector for Salesforce Release Notes

Note! This is a license protected version of Salesforce connector. Contact licensing@m-files.com to get a valid license.

Signed M-Files Connector for Salesforce is compatible with M-Files Online - June '22 Update or newer.

Summary of the fixed issues and improvements in this release:

M-Files Connector for Salesforce (23.11.0.0)

Improvement: Salesforce connectors require application license.

Description: Salesforce connectors is now license protected. A valid license is needed to use Salesforce connector and get the latest updates in the future. When the license expires it is not possible to use the connector anymore.

Defect: DateTime modification in M-Files doesn't update to Salesforce

ID: 169176

Symptom: When user modify DateTime in M-Files changes not update to Salesforce.

Solution: Fixed.

Improvement: Added possibility to convert Salesforce time values to different time zone in M-Files.

Description: Conversion is handled in connector and value that is saved to M-Files is modified. Also same kind of conversion is done in connector when value is written from M-Files to Salesforce. This change was especially done for customers who has M-Files server in different time zone than Salesforce. In these cases previously time value in Salesforce database was different than in M-Files database although both of them should have UTC values.
