M-Files Compliance Kit October 2020 Update (20.10.911.3) Release Notes

M-Files Compliance Kit October 2020 Update is compatible with M-Files Online - September '20 Update and M-Files 2018 - Update 2009 or newer.

Summary of the fixed issues and improvements in this release:

M-Files Compliance Kit October 2020 Update (20.10.911.3)

Defect: Same barcode generated for all symbology types
ID: 156800
Symptom: The barcode symbology type was always parsed as Code128 in barcode generation, regardless of the actual symbology type that had been defined.
Solution: Fixed.

M-Files Compliance Kit September 2020 Update (20.3.885.33)

Improvement: Multi-Server Mode support for Compliance Kit
ID: F-8054
Description: Multi-Server Mode is now supported in Compliance Kit.

Improvement: PDFTron support for PDF concatenation
ID: 155088
Description: You can now set PDFTron (PDFNet) to be used for PDF concatenation via the PDF Processor configuration.

Improvement: Training module performance improved
ID: 153692
Description: The Training module now uses memory and data caching more efficiently.

Defect: Compliance Kit: Advanced notifications has an issue with advanced search criteria
ID: 153346
Symptom: The advanced notifications preview does not correctly show previews for filter conditions if the filters include the condition "Deleted".
Solution: Fixed.

Defect: PDF Processor does not obey LocaleName
ID: 149711
Symptom: In a rendered PDF, dates are shown in wrong locale format.
Solution: Fixed.

Defect: Utilities sequence fails with Object type condition
ID: 156599
Symptom: When a user tries to check in a document that has "IsTemplate=true" and the document matches a sequence configuration where "Filter Conditions" include the "Object type" check, the check-in fails with the error message "Invalid pointer. (Object reference not set to an instance of an object.)"
Solution: Fixed.

Defect: Compliance Kit: Unique Object Enforcement filters do not work properly
ID: 153952

Symptom: Objects that do not match the "Additional Search Criteria" option in a unique object rule, but match all other criteria, are still found when the user searches for duplicates. This prevents the saving of potentially correct objects.
Solution: Fixed.

Defect: PDF Processor issue with files used by another process
ID: 154980
Symptom: PDF processing sometimes results in the following error: "The process cannot access the file "X" because it is being used by another process."
Solution: Fixed.

Defect: Owner (Person) in the default structure does not have named access control list
ID: 154039
Symptom: When the default structure in the User Synchronization module is used, the property "Owner (Person)" does not have any named access control list (NACL) attached to it. Therefore, if a structure where the "Person Restricted Data" object type is a subordinate to the "Person" object type, normal users cannot create this type of objects. Since the "Owner (Person)" is an automatically created property, you cannot modify the permissions manually.
Solution: Fixed.

Defect: The "is empty or missing" condition not working with Unique Object Enforcement
ID: 152842
Symptom: The "is empty or missing" condition does not work with the Unique Object Enforcement module. When you attempt to save a copy of a document that does not have the "is missing" property, the following error message is shown: "The object "X" cannot be saved. At least one object with the same metadata already exists."
Solution: Fixed.

Defect: Advanced Notifications not sent if the email address contains apostrophes
ID: 154841
Symptom: The Advanced Notifications module does not send notifications to email addresses that contain apostrophes.
Solution: Fixed.

Defect: Session timeout shown when using the Controlled Printing command in M-Files Web
ID: 150113
Symptom: In M-Files Web, when you select a PDF file and click Controlled Printing in the task area, the following error message is shown: "Session has expired. Redirecting to login page."
Solution: Fixed.

Defect: Conversion from PowerPoint to PDF causes black areas to appear
ID: 149137
Symptom: When a user converts a PowerPoint file to a PDF, the resulting PDF has extra black areas.
Solution: Fixed.

Defect: Completing a change request fails
ID: 150099
Symptom: When a user tries to complete a change request with a document that has never been checked in, an error is thrown.
Solution: Fixed.

Defect: Error when using float values as filters in the configurator
ID: 151488
Symptom: When you use float values with JsonAdaptors as filters in the configurator (for example, with Managed Properties of Compliance Kit), saving the configuration fails with a deserialization error.
Solution: Fixed.

Defect: Conversion from PowerPoint to PDF removes charts
ID: 151105
Symptom: When a user converts a PowerPoint file to a PDF, the resulting PDF file does not have charts on the first two slides.
Solution: Fixed.

Defect: PDF rendition fails if update conflicts are found
ID: 151805
Symptom: PDF processing fails with the error message "The system cannot find the file specified". This happens when retriable errors are found while uploading the rendition or checking the rendition object in.
Solution: Fixed.

Defect: Value of "PDFRenditionInstruction" not recognized
ID: 150167
Symptom: The previously defined "PDFRenditionInstruction" value (can also be a value imported from a full structure) is not recognized because the configuration name has been changed to "PdfRenditionInstruction".
Solution: Fixed.
